## What Temperature is Normal in Children?

There are a few methods of checking your child's temperature. It can be done rectally, in the mouth, under their armpit and in the ear.

- 1 The recommended method depends on the age of the child. From birth to age 5, axilla (under the arm) is the most recommended method and in the mouth for children older than 5 years old.
- 2 Normal temperature under the arm is 36.5°C - 37.5°C
- 3 Normal temperature in the mouth is 35.5°C to 37.5°C
